

Data Sheet

Cloud Review Services

Overview

Our Review Services are formal reviews of the current state of your Cloud implementation. They look at:

- Service Level Agreement (SLA) compliance
- Actual utilization statistics
- Review actual costs
- Plot trends in SLA compliance, utilization, and cost
- Review any strategic or tactical changes in your business that might impact usage of the Cloud
- Look for opportunities to move additional workloads to the Cloud

We have two flavors of Review Services: *Periodic Review Service* and *Special Review Service*.

Periodic Review Service

Our Periodic Review Service is, as the name implies, a Review Service on a specified schedule. Based on the rate of change in your organization and the criticality of the workloads moved to the Cloud, these could be weekly, monthly, quarterly or semi-annual meetings. For frequent meetings, the majority of the meetings might be fairly short (one or two hours) just reviewing the immediate past, with a longer quarterly meeting to cover all of the topics. In most cases, the full meetings should only take two or three hours to conduct, with a report delivered within one or two days of the meeting. Also in most cases, the meetings would be conducted remotely.

Special Review Service

Our Special Review Service is intended when there is some event, past or future, that should be reviewed. It could be a missed SLA, a coming new sales and marketing program, or potential merger or acquisition. Based on the type of event and urgency of the review, we would jointly agree on a time and expected duration of the review meeting.

About Purposeful Clouds

Purposeful Clouds (<http://www.purposefulclouds.com>) provides customized and standard consulting and training services to large and small organizations looking to improve agility, reduce aggravation and save significantly on IT costs by using Cloud Computing technology. These organizations rely on Purposeful Clouds experts to simplify their journey to the Cloud as they securely transition their business, processes, and applications to the Cloud or build and grow new Cloud business and related services. Because Purposeful Clouds is vendor neutral, they select the best-in-class combination of open or proprietary technologies, products, services and Cloud Service Providers. Purposeful Clouds services cover all phases of planning, implementation, on-going support, and reviews plus an all-encompassing training array to meet their client's specific short and long-term business and technology needs.
